Comes standard with the IQ-600 amplifier

OBJECTIVE

Earthquake Sound is proud to bring you the new Supernova MKVII (Mark Seven) Series subwoofers. When it comes to delivering uncompromised LFE performance with magnificent dynamics and accurate articulation, the MKVII Series is designed and engineered to go beyond the norm of perfection.

Just as its predecessor Supernova MKVI, the MKVII Series also utilizes the revolutionary IQ600 Class J amplifier and legendary MAGMA-X driver. All these components are enclosed in deep luxurious black piano lacquer cabinet specifically curved to reduce internal resonance and diffractions, allowing the MKVII to deliver a crisper bass and more accurate response.

Available in 12-inch and 15-inch sealed (front firing) and ported (passive radiator) enclosure designs; the MKVII is the new state-of-the-art subwoofer available today.

INTENDED USE

- ✓ Custom Home Installers & High-End Retailers
- ✓ High-End Home Theater Systems
- ✓ Recording Studios & Clubs
- ✓ Yachts

SPECIAL FEATURES & HIGHLIGHTS
